

CONSIDERING ADDING A

VOLUMETRIC MIXER

TO YOUR FLEET?

HERE'S 5 BENEFITS FOR YOU TO CONSIDER

1

HIGH-QUALITY CONCRETE

Fresh, high quality concrete produced on site is better than fatigued concrete that has been sitting in a drum for 30 minutes or more and water needs to be added.

MULTIPLE MIXES ON DEMAND

Mixes are easily adjusted on-site. For example, changing from flowable fill to a slab mix without leaving the job site.

2

PRODUCE ONLY WHAT YOU NEED

3

No more overpriced short load charges and no more wasted concrete. Produce exactly what you need and then move on to the next job.

HIGH PRODUCTION RATE

Volumetric mixers are capable of producing concrete at a rate of 1 metre per minute.

4

MULTIPLE APPLICATIONS

5

When the machine is loaded with the correct materials, you can create specialty concrete such colour and stamped concrete applications and rapid setting concrete.
